ABSTRACT

2 A tufting machine modular gauge assembly that allows damaged or
3 broken gauge elements to be replaced individually. The modular
4 gauge assembly consists of a gauge bar with a plurality of
5 modular blocks removably attached to the bar. The modular blocks
6 are six sided with a detent and fastener mechanism for attaching
7 the block to the gauge bar. The gauge elements may be attached
8 to the block by dedicated screw-pins or by a securing pin that
9 passes through all the gauge elements within a block.
